EDUCATION

University of Western Ontario · Canada — *Graduate April 2027*

Bachelor's in Computer Science (BSc), Minor in Software Engineering

WORK EXPERIENCE

motive

Motive motiverewards.com — *Nov 2025 – Present*

Software Engineer Intern · Building AI Infrastructure

5 mos • Toronto, Canada · TypeScript, NestJS, Next.js, React Native, MongoDB, Claude API, Portkey, Stripe, AWS

- Integrated Portkey as the AI gateway to route, cache, and monitor **10K+ LLM calls/month** in production, reducing API costs by **35%** and enabling real-time latency and cost observability across all AI features.
- Built data collection pipelines to ingest and structure **5,000+** event RSVPs, form responses, and user signals, powering an automated applicant curation system using Claude API.
- Developed an AI-driven evaluation engine that processes applicant batches in parallel, auto-approving or rejecting **1,000+ candidates per event** with generated reasoning, reducing manual review time by **80%**.

Western
UNIVERSITY · CANADA

Osinski Planetary Research Lab, Western University — *Sept 2024 – Sept 2025*

Software Engineer Intern · under Dr. Gordon Osinski

1 yr • London, Canada · Swift, SwiftUI, UIKit, URLSession, CoreData, Firebase, Git, XCTest

- Launched an iOS field data collection app used by **120+ operators** to capture GPS, rock samples, and observations across remote geological sites with offline-first sync.
- Launched role-based authentication via Firebase Auth that secured operator data across 3 research teams, enabling field deployment for a **$60K+** funded research initiative.
- Launched offline sync with conflict resolution that improved data capture reliability by **30%**, backed by unit and integration tests in CI/CD to catch sync failures before deployment.

PROJECTS

AI OrderFlow · Family Business Automation dynastyblades.com

TypeScript, Next.js, Node.js, PostgreSQL, Zapier, Claude API, EasyShip API

- Automated an end-to-end order fulfillment pipeline for an e-commerce business processing **100+ orders/day** across Etsy and Shopify, eliminating all manual order management as the business scaled.
- Built email webhook integrations with Zapier, then migrated to custom webhooks powered by Claude API for more accurate order parsing, extracting structured JSON, line items, and customer personalization details.
- Developed automated cron jobs that forwarded orders to a 3PL warehouse and purchased shipping labels via the EasyShip API (USPS/FedEx/UPS), reducing fulfillment time from **hours to minutes**.

SKILLS

Languages: TypeScript, JavaScript, Python, Swift, SQL, Java, C/C++, HTML, CSS

Technologies: React, React Native, Next.js, NestJS, Node.js/Express, FastAPI, SwiftUI, UIKit, Expo, PostgreSQL, MongoDB, CoreData, Firebase, Docker, AWS, Git

AI: Claude API, Portkey AI Gateway, LLM Integration, Prompt Engineering, Structured Output Parsing

Services: Stripe, EasyShip, Zapier, Twilio, Vercel, Railway, GitHub Actions, CI/CD
